Agreement between Mr L. (https://www.freelancer.com/u/mrfrank1?w=f) Service Provider and Md Nurul I. (https://www.freelancer.com/u/babusharif)-Freelancer

Details and Terms
Task: Convert or integrate whole Laravel system using Vuejs (Single Page app).

Deliverables: Totally working Single Page application site with 100 percent, all features of existing system http://viholdings.com.au/edu/public/login
With new all design and site powered by Vuejs single page app(using this theme https://pixinvent.com/demo/vuexy-vuejs-admin-dashboard-template/demo-1/dashboard/analytics)

All Laravel files, database files, design files and documentation (full source code and supporting files).

Total Duration: 18 days total--15 working days
Cost: 800$ AUD including project fees (Excluding 44$ NDA fees)

Start: 17th February 2020
Completion date: 7th March 2020
Freelancer.com feedbacks and rating only after the final projects (all files) transferred-transferred.

Process and milestones

1st milestone 50$	Prepayment
2nd milestone 25th February 2020 300$	75% of Task completed (Super admin dashboard all parts integrated with new vuejs design and fully working)
3thMilestone 2nd March 2020 200$	Everything remaining done Error testing and debugging. Site fully running. (100% task completed)
4th Milestone 7th March 2020 250$	Error free codes and site fully running. Completion and confirmation of the job and code transfer.

The milestone will be released only if the task listed in each milestone is fully COMPLETED; otherwise, the milestone will not be released (irrespective of the number of days taken if not completed). So, the developer should make sure that the task is completed on time for the release of a milestone. The developer agrees on this.

The needed pre-task to complete the milestone should be automatically completed (for example, to make the design or use of icons, etc.). **The files developed up to the milestone to be transferred after payment is sent.** All the requirements have been listed in advance and must be completed as it is, and freelancers cannot complain later about the complexity and size of the task (stating project is too big/complex etc). The freelancer understands and agrees to complete all the tasks.

Requirements

We are looking for a laravel and VueJs expert.

We have a system (educational institute/college system) in Laravel (Php+Mysql system) that we are planning to implement. So, we need someone to integrate vuejs — only backend.

Now:

The current backend system is fully working but does not use vuejs at all, **no API export**, no Vue js components

Uses JQuery and ajax in some parts.

What needs to be done:

In short cut: Introduce Vuejs to the existing system.

You will have to make standard Laravel to single page vuejs app

Need to introduce Vue router,

No need to change the design, **but you may have to rewrite the CRUD form files using existing design (who knows Vue understand this process)-convert each existing view crud blade files to vuejs form js files** and make API (changing existing controller) for it as well (some parts of existing controller CRUD function may need to be updated to accommodate the vuejs form submission).

There are various types of users.

Admin Login:
User: superadmin@gmail.com
Password: admin
Student Login:
User: student@gmail.com
Password: pass
Staff/Teacher Login:
User: staff@gmail.com
Password: pass
Guardian Login:
User: guardian@gmail.com
Password: pass

Account Login:
User: account@ gmail.com
Password: pass
Library Login:
User: library@gmail.com
Password: pass

So for the expert, it is a not difficult task (usual conversion task, doing the same thing for various sections i.e., student, teacher)

Strictly important: You must change all the parts (as it is now), not only some parts and the system should fully work as it is doing now after the integration The original app should fully work in the new design (just change to the single-page app with the use of Vuejs).
All the functions should be available or should not be broken if there are any errors that should be corrected. It is up to the developer to make the required changes or corrections to make it fully working if needed, including the integration of Vuejs. We need the final backend powered by Vuejs.

Caution: we believe that any Vuejs expert would know this task requires introducing Vue router, installing npm, installing components and rewriting crud files in vuejs form, use of Axios, etc. No experimentation. Please make sure that you know what is to be done before you bid.

The project is a more integrating task, plus you have to change all the form interaction as well and submit the form using VueJs. All the parts/pages of existing should be functional (as it is) with vuejs and should have new design.

You do NOT need to add any new features.

The developer will have to create required API to integrate the existing system with jquery/Ajax (if it is already not there).
The site has various types of users and log in. All the types of user's dashboard have to be changed.

Content provided
Original site source code
jquery/vuejs Theme source code

Additional Notes:
This file will be transferred to the freelancer, and the task will be started after freelancer agrees on the condition:
1) not to distribute or upload the code, design, videos, icons, or any other materials sent by us for the project. It should be strictly used for customizing THIS task only.
2) fully complete and deliver all the tasks-requirements listed above on time.
NDA must be signed. Programming codes and created application cannot be disclosed to third parties and codes, and application in parts or full cannot be reused, and no name of "developing company" or freelancer.
It must be completed on the agreed deadline. We take the deadline seriously. If it is too late (more than 30 normal days i.e., two times the promised time), we will have the right to cancel a project with a claim for the refund. Freelancer will have no problem with this..
Periodic updates required during the project duration. If freelancer does not respond for long time after repeated try to contact freelancer (more than 6 continuous days), the service provider will have a right to contact freelancer.com
The freelancer should ensure that site/code is fully working before delivering.

If the job is abandoned by a freelancer without completing it for their own reasons (other than listed here in the document) we will be claiming for a full refund and $44 nda fees.

Support
 Post-implementation Support for error debugs and error removal (if there are any). Support to be provided and errors to be fixed up to 21 days of project completion (for things done by freelancers).

The agreement means the freelancer has fully accessed and understood the tasks to be completed. The agreement also means freelancer commit to complete the job and assure that freelancer has all the required capabilities/knowledge/skills needed to completed this project.
If both parties agree on these, then only the project will be started. Once the project is started, it will be considered that both parties (Job poster and freelancer) agree all the above terms and conditions.
